

PEARC18

Practice and Experience
in Advanced Research
Computing

July 22-26, 2018
Pittsburgh PA

Wyndham Grand Pittsburgh Downtown

PEARC18 is for everyone who works to realize the promise of advanced computing as the enabler of seamless creativity. It is for scientists and engineers, scholars and planners, artists and makers, students and teachers, all who depend on the efficiency, security, reliability and sustainability of increasingly complex and powerful digital infrastructure systems.

PEARC18 provides a forum for discussing challenges, opportunities and solutions among directors, managers, computational scientists, end users, students, educators, system administrators, user support staff, as well as industry and government agency representatives from around the world.

This year's program offers tutorials, plenary talks, workshops, panels, visualization showcase and more. The program tracks, running in parallel, are:

- **Facilitation of Advanced Infrastructure**
- **Applications of Advanced Computing Infrastructure**
- **Visualization and Data Analytics**
- **Workforce Development and Diversity**

This year's program offers tutorials, plenary talks, panels, workshops and more. For information on conference offerings, visit these links:
