Areas of Concern

- Functioning of the individual and team
- Functioning of the research software
- Functioning of the research field itself

Developing a pathway to research software sustainability
Functioning of the Individual and Team

- Training & education
- Ensuring appropriate credit for software development
- Enabling publication pathways for research software
- Fostering satisfactory and rewarding career paths for people who develop and maintain software
- Increasing the participation of underrepresented groups in software engineering
Functioning of Research Software

- Supporting sustainability of the software
- Growing community, evolving governance, and developing relationships between organizations, both academic and industrial
- Fostering both testing and reproducibility
- Supporting new models and developments (e.g., agile web frameworks, Software-as-a-Service)
- Supporting contributions of transient contributors (e.g., students)
Functioning of the Research Field Itself

- Growing communities around research software and disparate user requirements
- Cataloging extant and necessary software
- Disseminating new developments
- Training researchers in the usage of software
- Understanding and improving pipelines of diverse developers and maintainers
URSSI and Other S2I2 Projects

- **URSSI** (Software Sustainability)
- **SGCI** (Science Gateways)
- **MoISSI** (Molecular Sciences)
- **HEP-S2I2** (High Energy Physics)

Results from a US survey about Research Software Engineers

Daniel S. Katz, Sandra Gesing, Olivier Philippe, and Simon Hettrick, June 21, 2018

In 2016, the UK Software Sustainability Institute (SSI) ran a first survey of Research Software Engineers (RSEs): the people who write code in academia. This produced the first insight into the demographics, job satisfaction, and practices of RSEs. To support and broaden this work, the Institute planned to run the survey every year in the UK and an ever-expanding number of countries so that insight and comparison can be made across the globe. Ultimately, the SSI hopes that these results, the anonymized version of which are open licensed, will act as a valuable resource to understand and improve the working conditions for RSEs.

In 2017, led by Olivier Philippe and Simon Hettrick from the SSI, a set of such surveys were run across the UK, Canada, Germany, the Netherlands, South Africa, and the US. One or more people from each non-UK country “translated” the questions so that they made sense in the local language and culture. The UK team ran the surveys, with the collaborators from the other countries—Scott Henwood (Canada), Stephan Janosch and Martin Hammittsch (Germany), Ben van Werkhoven and Tom Bakker (Netherlands), Anelda van der Walt (South Africa), and Daniel S. Katz and Sandra Gesing (USA)—helping to publicize the survey in their countries. When the surveys were complete, the UK team analyzed the
